A: $\int_0^{\infty} \frac{dt}{t} = \int_0^{\infty} e^{-t} dt = \int_0^{\infty} e^{-x} dx = \Gamma(0) = \lim_{n \rightarrow \infty} \left(n \int_0^{\infty} e^{-x} dx \right) = \lim_{n \rightarrow \infty} (n \Gamma(n)) = \lim_{n \rightarrow \infty} n \Gamma(n)$

I have a button that when clicked, will ask the user to choose the option that they would like to perform (i.e. click here to view my profile). The problem I'm having is that, when the user clicks the button, it adds the text "Click Here" to the textbox, and that textbox has only 1 character left, thus prompting the user to enter more text, and when they do it again, it adds that text to the textbox and it's not working. How can I make it so that it saves the item from the array so that I can use it later?

```
btnSubmit.Click += delegate { string selectOption = txtInput.Text; List optionList = new List(); optionList.Add("Click here"); if (optionList.Contains(selectOption)) { optionList.Remove(selectOption); MessageBox.Show("You Already Selected the Item!"); ca3bfb1094
```

Markup Assist helps you create and send high-quality wireframe drawings (with annotations), quickly and efficiently. Automatically generate and send a wireframe drawing based on an open profile or from your AutoCAD drawings. Markup Assist does not rely on the drawing connection file to display annotations. It uses AutoCAD's standard layer masking to add annotations to your wireframe. Advanced 3D viewer: See all your design elements at once: annotate, zoom, and rotate 3D drawings and a selection of 2D drawings simultaneously. Use a keyboard shortcut to rotate the 3D viewer, or use the 3D F6 menu. (video: 7:43 min.) Use controls in the 3D viewer to change the viewing direction and size: toggle the side, back, front, top, and bottom views, zoom in and out, or pan the 3D viewer and select the view area. (video: 2:36 min.) Additional toolbars: Enter the coordinate system and save a project to another location from the Coordinate Systems toolbar. Use the 3D toolbars for CAD operations. You can also set up project settings, turn on the 3D coordinate system, and see your current 3D view. Enhancements for 2D Drafting: Import an AutoCAD drawing as a 2D outline, or create a 2D drawing from an AutoCAD drawing. Also, use the options in the New tab to select the object you want to import. Continuous 2D and 3D line tracing: Trace over an arbitrary path, or trace a two-dimensional path that you draw, such as a line, polyline, or spline. You can also copy or paste the path that you trace in the drawing. (video: 3:16 min.) Extended offset/rotate/mirror: Move, rotate, and mirror all elements on a drawing, and the results are consistent throughout the drawing. (video: 2:03 min.) Parallel, perpendicular, and perpendicular copy: Parallel and perpendicular copy with snap to the grid and multiple copy dialogues. The number of parallel or perpendicular copies you can perform is also shown in the tool bar. Fast 2D toolbars: Find, select, and measure are faster in the drawing. With the Find toolbar, you can search for an object, copy it, paste
